#### **DETAILED ACTION**

# Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-7, 9-15, 17, and 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Raulerson et al. (USPN 6,551,281).
  - Raulerson et al. discloses a catheter (10) having a stiffening section 51 as claimed, which is located in the middle of the catheter (see figure 2). The other catheter embodiments shown in figures 5 also show a separation of the catheter-stiffening element from the distal and proximal terminus and a needle hub (28) with a needle (36) see figure 5 and 6 and entire reference.
- 3. Claims 1-7, 9-15, 17, and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Orr et al. (USPN 5,263,938).
  - Orr et al. discloses a catheter (16) with a proximal section (10), a body (24) and a distal section (22) having a stiffening section 68 as claimed, which is located in the middle of the catheter (see figure 10). Orr et al. also shows a needle hub (56) with a needle (54) [see figure 8].

# Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 8, 16, 19-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Raulerson et al. or Orr et al. as applied to the claims above.

Raulerson et al. or Orr et al. discloses the invention substantially as claimed except for the stiffening coating having a thickness not exceeding about 0.08mm, and the sleeve being made out of PET. The instant disclosure describes this dimension as being merely preferable, and does not describe it as contributing any unexpected result to the catheter. As such this parameter is deemed matters of design choice (lacking in any criticality), well within the skill of the ordinary artisan, obtained through routine experimentation in determining optimum results. With respect to the PET material, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Raulerson et al. or Orr et al. with a PET material, since the selection of a known material based on its suitability for its intended use supported a prima facie obviousness determination in Sinclair & Carroll Co. v. Interchemical Corp., 325, U.S. 327, 65 USPQ 297 (1945).

#### Response to Arguments

6. Applicant's arguments, filed 9/12/07, with respect to the 102 and 103 Rejections have been fully considered and are not persuasive.

Page 4

Application/Control Number: 10/635,366

Art Unit: 3763

- 7. Applicant is arguing that the prior art doesn't teach the claimed invention since the prior art fails to give the same structure the same name. The examiner disagrees with the applicant because the examiner and one of ordinary skill in the art would interpret the structure of the prior art to anticipate the claimed elements. The examiner interprets the claim limitations with the broadest reasonable interpretation, therefore as long as the prior art meets the dictionary definition of the claimed element and is capable of working in the same fashion as the claimed element, then the prior art would anticipate applicant's invention. Therefore the examiner disagrees with applicant's interpretation of the prior art since the prior art reads on the broadest reasonable interpretation of the claimed invention and fails to view the prior art as interpreted by the examiner.
- 8. With regards to the claimed catheter, the interpretation is a tube like structure that has a lumen, which is shown in both prior art references. The "catheter" of both prior art references are flexible since they are capable of flexing and are made from a polymer and not steel or a metal that is inherently rigid. With regards to function, the examiner interprets this language in view of MPEP section 2114.

### Conclusion

9. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

Application/Control Number: 10/635,366 Page 5

Art Unit: 3763

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew F. DeSanto whose telephone number is 571-272-4957. The examiner can normally be reached on Monday-Friday 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nick LUCCHESI can be reached on (571) 272-4977. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance call 800-786-9199 (IN USA) or 571-272-1000.
